AUTHOR: Karyabkina, N. V. (Candidate of technical sciences); Kishkin, S.T. (Doctor of technical sciences)

TITLE: Radiographic study of oxidation and recrystallization processes in the surface zones of nickel-base heat-resistant alloys

SOURCE: Moscow. Aviatsionnyy institut. Trudy, no. 158, 1964. Issledovaniya strukturny i svoystv zhаропрочных сплавов (Studies on the structure and properties of heat-resistant alloys), 35-42

TOPIC TAGS: nickel alloy, heat resistant alloy, nickel alloy oxidation, nickel alloy recrystallization, radiography, surface oxidation, surface recrystallization / alloy EI437B, alloy EI617

ABSTRACT: The purpose of this investigation was to determine the stability of the surface layers of gas-turbine blades made from cast alloy, alloy EI437B or EI617 with respect to oxidation and recrystallization in the furnace atmosphere. Specimens were heated in a muffle furnace at 650-950°C for periods up to 150 hours. The appearance of the first points on the front line was taken as the beginning of oxidation. Resulting data were used to plot curves of stability against oxidation

Card 1/2

L 41225-65

ACCESSION NR: AT4044753

and recrystallization, which showed that the start of oxidation and recrystallization coincides for each alloy; these processes start later at lower temperatures. Cast alloy was the most stable. At higher temperatures, the differences in stability of the different alloys become insignificant. Curves are also presented showing the onset of oxidation as a function of annealing time and, using these, the energies of activation of the recrystallization process were calculated from the formula  $T_H = T' e^{\frac{Q_H}{RT}}$ , where H is the time of onset of recrystallization, T is the annealing temperature;  $T'$  is a constant coefficient; R is the gas constant; and  $Q_H$  is the energy of activation. For alloy EI437B this was 56,000 cal/gm-atom. The authors conclude that oxidation and recrystallization take place simultaneously, but are both limited to the work hardened surface layer. The alloying elements apparently migrate into the oxide layer, and the recrystallized grains show lattice parameters approaching those of pure nickel. "The authors express their gratitude to x-ray technician S.P. Kulagin." Orig. art. has: 3 tables, 2 figures and 1 formula.

Orig Pub : Izv. AN Turkmen SSR, 1957, No 3, 112-115.

Abstract : The results of studies conducted in 1955-1956 in the Institute of biology AN Turkmen SSR are given. The first cutting of sprouts took place in spring and the second in the summer of the same year. It was found that the food stock for the spring feeding of caterpillars of mulberry silkworms was reduced by half for the next year, after the two-fold cutting. Therefore, it is necessary to cut the sprouts twice in Turkmeniya. Only after having taken into

Abstract : Studies made at the Turkmen Agricultural Institute in 1952 have shown high white mulberry seed germinating capacity in seeds laid out for germination daily for the twenty days following picking. It appeared that postharvest secondary ripening and biological quiescence were lacking in the seeds from this mulberry tree. Excellent results were gotten in 1951 when seeds were germinated after having been kept for 3½ months and in 1952 when stored for 2 months after picking. These show

Title : The question of planning the organization of drilling work production. (In the order of discussion)

Periodical : Neft. khoz., v. 33, #11, 1-10, N 1955

Abstract : The authors analyse different phases relating to the well drilling works and indicate shortcomings and lack of proper coordination, planning and organization. This article is one among many published in this journal in a general discussion on the subject of achieving better efficiency in drilling works through better planning, organization, adoption of more modern equipment and technical methods, mechanization of work and automation.

Card 1/1 Pub. 110 a - 10/15  
Author : Karyagin, N. P., Kand. Tech. Sci.  
Title : Possible use of a heat-pump in a district heating boiler installation.  
Periodical : Teploenergetika, 3, 49-54, Mr 1956  
Abstract : The author discusses the possible use of a heat pump in a heating boiler unit. The efficiency limit for these pumps, which use heat from flues of district heat boilers, is computed. Three figures illustrate schematic layouts of these installations.

AUTHOR: Karyagin, N.P. Candidate of Technical Sciences

TITLE: Condensing Equipment for Industrial Undertakings.  
(Kondensatsionnoye khozyaystvo promyshlennyykh  
predpriyatiy)

PERIODICAL: Promyshlennaya Energetika, 1958, ^Nr 11, pp 16-17 (USSR)

ABSTRACT: Although a lot of work has been published on the collection and return of industrial condensate, the condensing equipment still works badly in many undertakings. Losses of condensate are not so easily noticed as losses of steam and the cost too is often hidden. Analysis of reports on boiler failures show that about 30% of them occur as the result of unsatisfactory water conditions resulting in sludge or scale deposition or corrosion. Because of the great economic importance of collection and return of condensate the Gor'kiy Regional Directorate of the Scientific-Technical Society of Industrial Power Engineers recently organised a special conference of power and heat engineers of industrial undertakings. The conference revealed an unsatisfactory position in the collection and return of condensate in a number of

Condensing Equipment for Industrial Undertakings

SOV/94-58-11-6/28

industrial undertakings in Gor'kiy, brief details are given and it is claimed that these conditions are typical for most industrial undertakings in the Gor'kiy economic region. The conference made a number of recommendations with the object of improving the collection and return of condensate. Some of the changes recommended are of an organisational and accounting nature and others are concerned with reconstruction of condensate plant. Great difficulty was being experienced in obtaining equipment for putting condensing equipment into order such as tanks and the like and the automobile works had to make a good deal of equipment for itself at considerable expense. The local council of national economy was urged to undertake the production of the necessary material.
